## DETAILED ACTION

### *Double Patenting*

1. The nonstatutory double patenting rejection is based on a judicially created doctrine grounded in public policy (a policy reflected in the statute) so as to prevent the unjustified or improper timewise extension of the “right to exclude” granted by a patent and to prevent possible harassment by multiple assignees. A nonstatutory obviousness-type double patenting rejection is appropriate where the conflicting claims are not identical, but at least one examined application claim is not patentably distinct from the reference claim(s) because the examined application claim is either anticipated by, or would have been obvious over, the reference claim(s). See, e.g., *In re Berg*, 140 F.3d 1428, 46 USPQ2d 1226 (Fed. Cir. 1998); *In re Goodman*, 11 F.3d 1046, 29 USPQ2d 2010 (Fed. Cir. 1993); *In re Longi*, 759 F.2d 887, 225 USPQ 645 (Fed. Cir. 1985); *In re Van Ornum*, 686 F.2d 937, 214 USPQ 761 (CCPA 1982); *In re Vogel*, 422 F.2d 438, 164 USPQ 619 (CCPA 1970); and *In re Thorington*, 418 F.2d 528, 163 USPQ 644 (CCPA 1969).

A timely filed terminal disclaimer in compliance with 37 CFR 1.321(c) or 1.321(d) may be used to overcome an actual or provisional rejection based on a nonstatutory double patenting ground provided the conflicting application or patent either is shown to be commonly owned with this application, or claims an invention made as a result of activities undertaken within the scope of a joint research agreement.

Effective January 1, 1994, a registered attorney or agent of record may sign a terminal disclaimer. A terminal disclaimer signed by the assignee must fully comply with 37 CFR 3.73(b).

2. Claims 7-12 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,491,843. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant claims require a more specific pH range than the claims presented in the '843. The pH range of '843 encompasses the range of the instant case and thus would render obvious the instant claims.

3. Claims 7-9 are rejected on the ground of nonstatutory obviousness-type double patenting as being unpatentable over claims 1-10 of U.S. Patent No. 6,627,107. Although the conflicting claims are not identical, they are not patentably distinct from each other because the instant

claims require a more specific pH range than the claims presented in the '107. The pH range of '107 encompasses the range of the instant case and thus would render obvious the instant claims.

### *Conclusion*

4. The following art is relevant to the instant applications but does not constitute art suitable for either anticipation or rendering obvious the instant claims: Grover et al (US 5,759,917), Grover et al (US 6,689,692), and Love, Jr. et al (US 6,033,993).

5. Grover ('917 and '692) teaches slurries for polishing semiconductors which contain carboxylic acids. Although Grover teaches the slurry and the acid, Grover fails to teach carboxylic acids with amino functionality such as the those required by the instant claims.

6. Love teaches the require amino acids as set forth by the instant claims but fails to teach the use of these compounds in a slurry composition. The compositions of Love are specifically intended to remove photoresists which would teach away from the instant use of polishing a surface.
